User and Role-Based Access Control

Aim

To configure User and Role-Based Access Control in Zoho Creator to manage user permissions and restrict access to application features based on assigned roles.

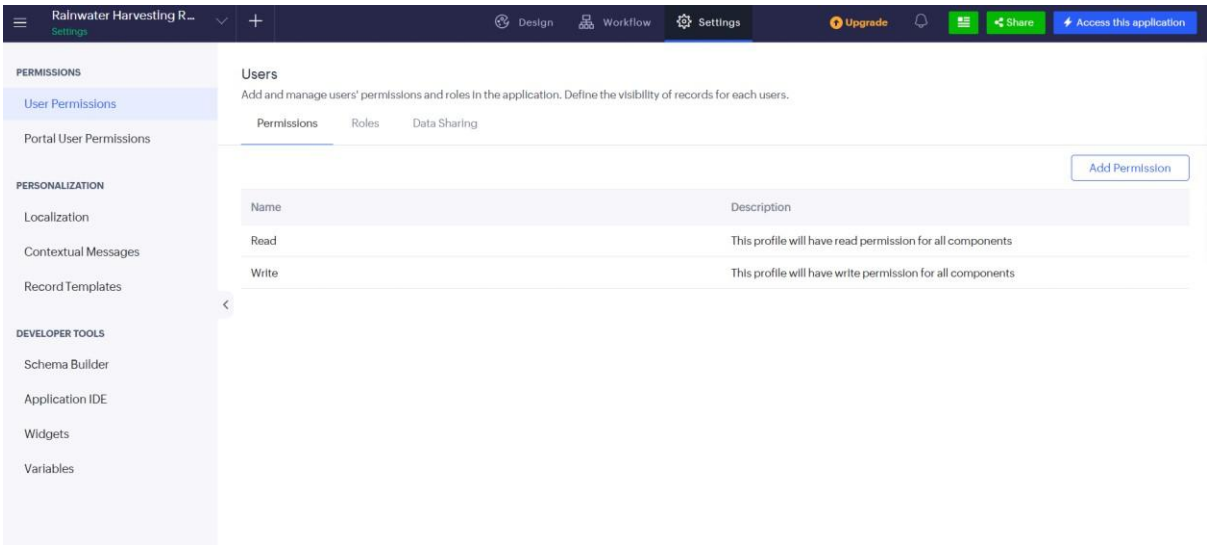

Procedure

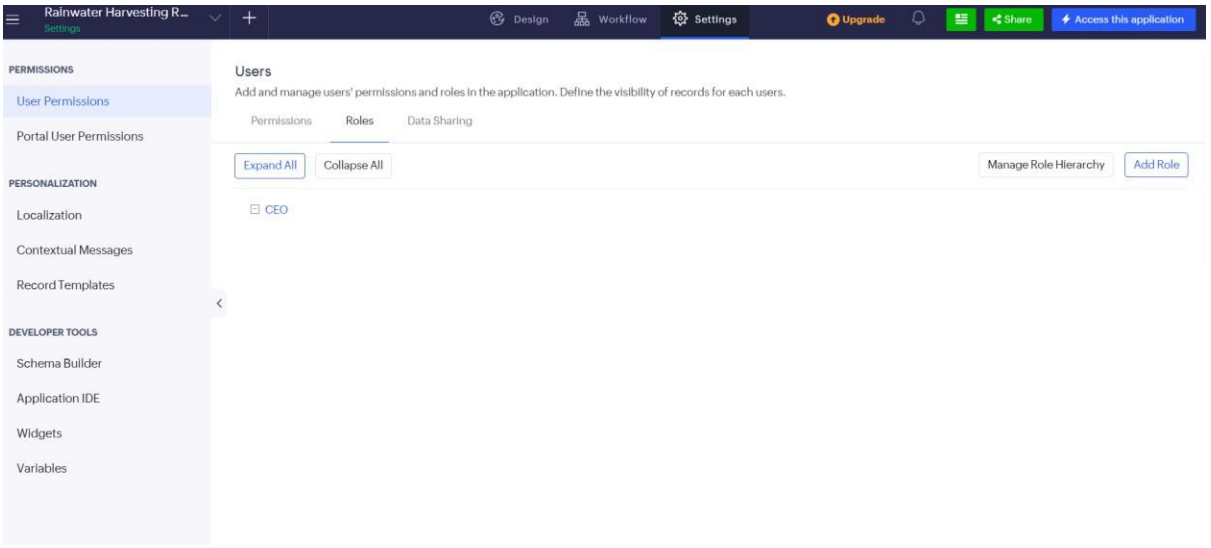

1. Open the Rainwater Harvesting Record System application in Zoho Creator.
2. Navigate to Settings.
3. Select User Permissions.
4. Open the Roles tab to view the existing roles.
5. Click Add Role to create a new role.
6. Enter the role name as Admin and save it.
7. Create or configure other roles, such as Viewer, if required.
8. Assign appropriate permissions to each role according to the user's responsibilities.
9. Add users to the application and assign the appropriate roles, if the user-management options are available.
10. Test the permissions by checking whether users can access only the forms, reports, and other features permitted for their roles.

OUTPUT

User Permission Page

Result

User and Role-Based Access Control was configured in Zoho Creator to organize users according to their responsibilities. Roles such as Admin and Viewer can be used to manage access to the Rainwater Harvesting Record System. The permissions assigned to each role help protect application data and prevent unauthorized access to forms, reports, and other features.
