Exp no. 03

Survey report on Emergency Trends in low-code app development.

Aim:

To study the emergency trends in low-code app development & understand how low-code platforms are changing the software development process.

Introduction:

low-code app development allows users to create app using VI / drag & drop components, minimal hand-written code. It helps organizations develop apps faster & makes app development accessible to users with limited programming experience.

Emergency Tools:

1. AI-assisted development:
   AI is increasingly used to generate code / workflow, & app components.
2. Mobile app developments.
   low-code platforms provide tools for quickly creating responsive mobile app
3. cloud-based development:
   Cloud platform enable apps to be developed / deployed & managed online.
4. Workflow automation:
   Business use low-code tools to automate repitive tasks & business process.

5. Integration with API's

modern platforms provide easy integration with databases, API & 3-party services.

6. citizen development:

Non-programming can build simple business apps with minimal coding knowledge.

Conclusion:

low-code app development is becoming an important approach for building apps. quickly & efficiently.

Fri/9/26

Results:

The emerging tools in low-code app development were surveyed & their role in simplifying & accelerating app dev was understood.
