Integration in Zoho Creator

AIM

To integrate different forms in Zoho Creator using lookup fields and establish a relationship between the Storage Tank and Water Usage forms in the Rainwater Harvesting Record System.

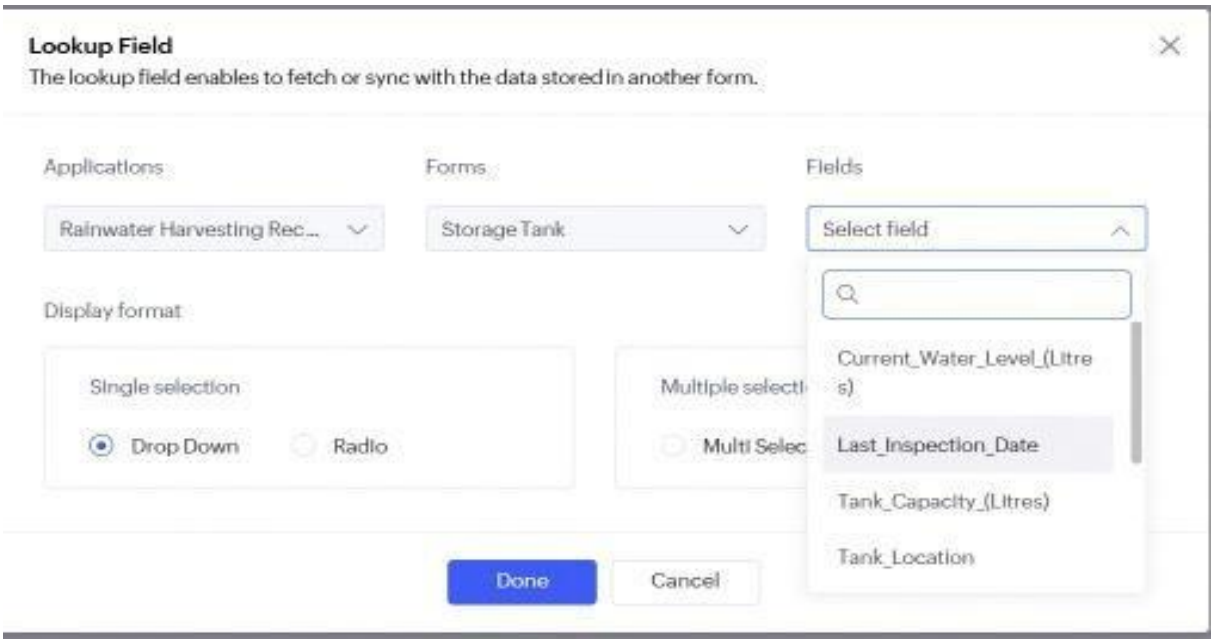

PROCEDURE

1. Open Zoho Creator and select the Rainwater Harvesting Record System application.
2. Create the required forms: Rainfall Record, Storage Tank, and Water Usage.
3. Open the Water Usage form in Edit mode.
4. Drag and drop a **Lookup field** into the Water Usage form.
5. Name the lookup field as Tank Lookup.
6. In the lookup field properties, select Storage Tank as the form to look up.
7. Select Tank Name as the display field so that the available tank names appear in the dropdown list.
8. Save the form and open the Water Usage form to test the integration.
9. Select a tank, such as Main Rooftop Tank, from the lookup dropdown. Enter the usage date, water quantity, usage purpose, and other required details.
10. Submit the form and verify that the record is saved successfully.

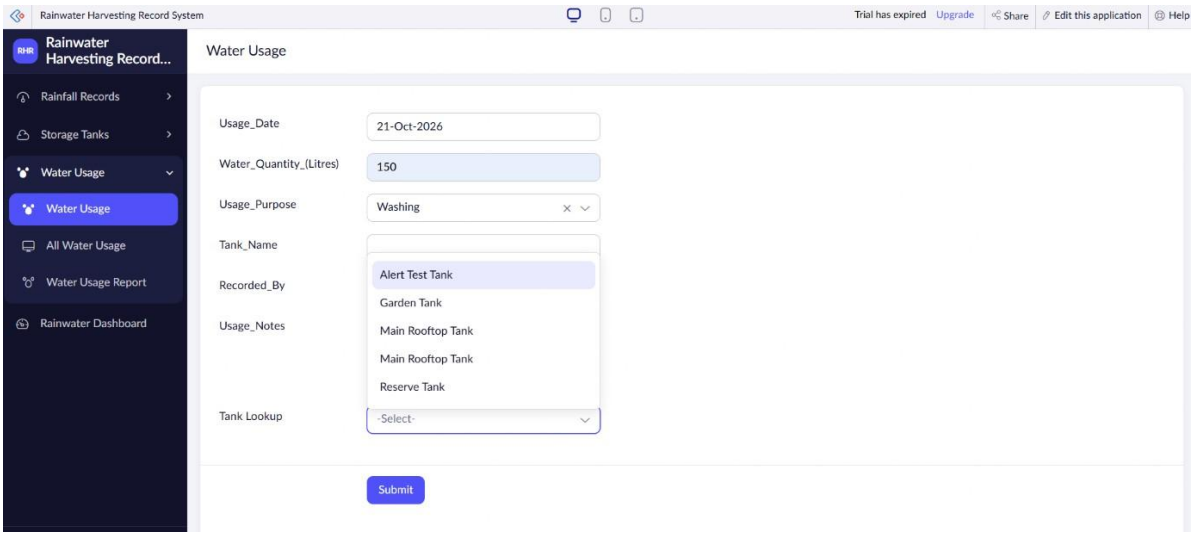

11. Open the Water Usage report and verify the saved record. The selected tank name can be viewed through the Tank Lookup field.

OUTPUT

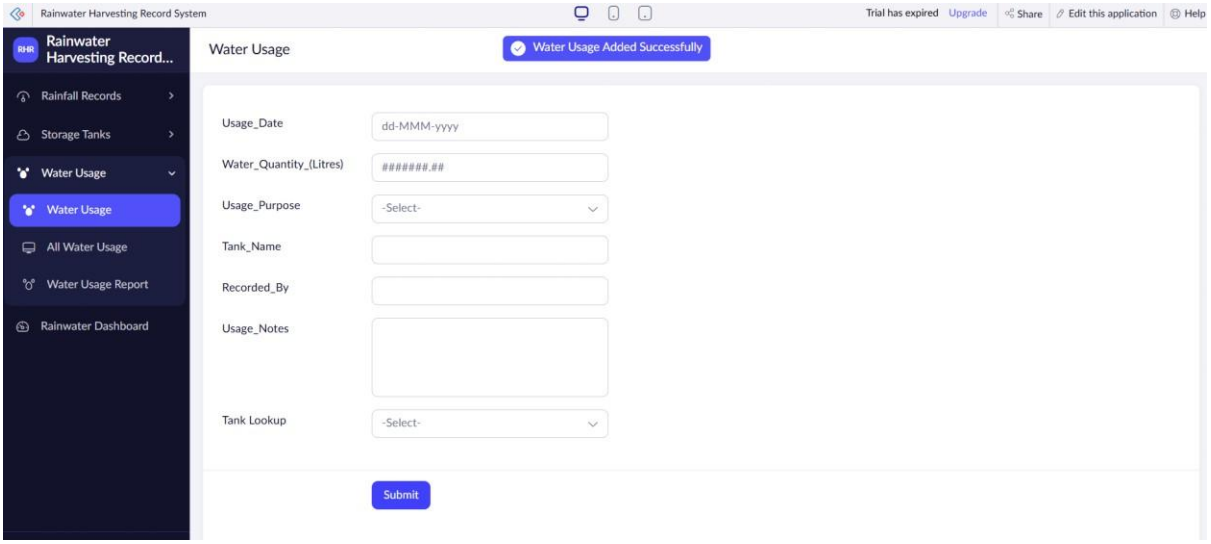

Lookup Field Configuration

Tank Names Dropdown

Successful Water Usage Record Submission

RESULT

Integration was successfully configured in Zoho Creator using a Lookup field. The Tank Lookup field in the Water Usage form was connected to the Storage Tank form, with Tank Name selected as the display field. The dropdown displayed the available tank names, including Main Rooftop Tank, Garden Tank, and Reserve Tank.

A test Water Usage record was submitted successfully after selecting a tank from the lookup dropdown. Thus, the integration between the Storage Tank and Water Usage forms was implemented and tested successfully.
